

Eaton's Industrial Portfolio
Preferred Products Guide - North America

EATON

Powering Business Worldwide

This document is intended to provide a printable guide to help select Eaton Industrial Hydraulics products with the best lead time. The products are arranged by product family and have been selected based on lead time segmentation. Please note that pricing and lead times shown in this guide are for reference only. As we are

constantly striving to improve lead times, please refer to PowerSource for up-to-the-minute accurate lead time and pricing information. For model code breakdown and further product details, please refer to the relevant product catalogs also available on PowerSource.

Medium Duty Open Circuit Piston Pumps (PVM)

Eaton M Series pumps are open circuit, axial piston designs. A variety of control options allows the pumps to perform most efficiently in a specific application. Efficiency of the pump controls allows down-sizing of system cooling needs,

saving up front cost in the machine. Alternatively, cooling capacity could be kept the same and the flow capability of the system increased, thus improving performance and customer satisfaction.

DuraForce Open Circuit Pumps (HPR)

High pressure axial piston pump in swash plate design for open loop systems. Clockwise or counter clockwise rotation. Self-priming at high nominal speed. Higher rotating speed by tank pressurization or swash angle reduction. Adaptive noise optimization SPU.

Decompression fluid is drained via pump housing for suction side stability. Exact and rugged load sensing controls. SAE high pressure ports. SAE mounting flange with ANSI or SAE spline shaft. Through shaft SAE A, B, B-B, C, D and E. Optional tandem and multiple pumps.

Hydrokraft Pumps (PVX/PVW)

Axial piston pumps with swashplate design for reliable operation and long life. Pressure up to 420 bar. Rated speed up to 1800 RPM. Higher speeds possible. Oversize shafts and bearings. Rotating and pressure loaded parts are pressure balanced. Integrated pilot pump, filter and

pressure relief valves available. "Building block" design gives these pumps a wide range of applications. Fast response times. All Hydrokraft A-items can be ordered with expedited air freight from Wehrheim in 6 weeks.

Vane Products

V10/V20, V, VQ, VQH

The vast majority of Vane products are A-items with 15 day lead time, a table listing the A-items for vane products is longer than this whole document. Please refer to PowerSource for complete price and delivery information for V10/20, V, VQ, VQH pumps.

Vane Express Program

Instead, we will focus on the Vane Express program, which enhances the A-item lead times by offering next day shipment for an 8% net premium. The products offered are the most popular V10 and V20 pumps, and V and VQ cartridge kits. Popular service parts are also available. Please reference document ID

E-PUID-BB001-E2 for complete program details, and note that Express products are ordered directly by submitting a PO to Express@Eaton.com. We will also feature a list of preferred products for the VMQ product line, which do not have any A-items. The B-items are offered at a competitive 20 day lead time.

Industrial Valves

Directional Valves (DG)

These solenoid operated directional control valves are for directing and stopping flow at any point in a hydraulic system. Efficient control of greater hydraulic powers without increasing solenoid power consumption. Installed cost and space savings from higher power/weight-and-size ratios. Increases system efficiency; the result of improved manufacture of spools and bores. Installation flexibility resulting from choice of numerous com-

binations of solenoid connectors and locations. Multi-fluid capability without need to change seals. Higher sustained machine productivity and higher uptime because of proven fatigue life and endurance, tested over 20 million cycles. Solenoid coils can be changed quickly and easily without leakage from the hydraulic system. Compact, cost effective system design when used with SystemStak™ valves and subplates.

Industrial Valves

Mobile DG Valves

Reliable performance with best in class IP69K environmental protection against dirt and high-pressure moisture ingress. Flexible wiring installation with reversible coils. Flows up to 80 l/min (21 USgpm) for D03/ NG06. Mounting face meets ISO 4401 standard, size D03/NG06. Can serve as a pilot control for two stage valves for

high flow applications. This new mobile line of DG valves is has special pricing and ordering requirements. The pricing discount structure is entirely quantity based, this product line does not use CCR discounts or rebates. The price is based on quantity ordered for immediate delivery (future delivery scheduling is not available).

Industrial Valves

Proportional Valves

Technology continues to improve, so does the engineering Eaton builds into its proportional valves, that have both product breadth and width consisting of on-board electronics (OBE) & non-OBE, full functionalities, complete sizes, different performance levels to meet various customers' demands in Industrial and Mobile markets. With a wide range of

markets serviced, our proportional valves are enabling truly creative solutions. The KB family of proportional valves have integrated OBE with superior reliability and durability featuring digital electronics, IP67 environmental protection, reduced power consumption, valve enable, and ramp adjustment.

Industrial Valves

AxisPro™ Servo-Performance Proportional Valves

Built on the proven KB Servo Proportional Valve technology, Eaton's next generation proportional valve provides four levels of performance in a modular design. These four-way solenoid operated proportional

valves offer high dynamic performance which enables them to be used in closed loop applications previously only possible using conventional servo valves.

Industrial Valves

Slip-in Cartridge Valves

Cartridge valves are targeted at more efficient, faster and more compact hydraulic system solutions to meet the changing needs of new generations of hydraulically operated machinery and equipment. Today's machines need controls that are exceptionally cost-effective and energy efficient. Eaton-Vickers cartridge valves fulfill these

needs by offering the following product advantages: system design flexibility, lower installed cost, smaller package size, better performance and control, improved reliability, higher pressure capability, more efficient operation, and the elimination of external leakage and reduction of internal leakage.

Industrial Valves

SystemStak™ Valves (DGM)

These compact hydraulic systems feature modular valves that are “sandwich” mounted between a directional control valve and a standard mounting surface. All circuit flow paths are contained within the control valve and modules.

These valves provide a compact hydraulic circuit at a reduced cost, eliminating interconnecting piping. Each valve “stack” can be configured to provide the specific system functions.
